☰ README.md

react-transition-group `npm` `v4.4.2`

> **ATTENTION!** To address many issues that have come up over the years, the API in v2 and above is not backwards compatible with the original `React addon (v1-stable)`.
>
> For a drop-in replacement for `react-addons-transition-group` and `react-addons-css-transition-group`, use the v1 release. Documentation and code for that release are available on the `v1-stable` branch.
>
> We are no longer updating the v1 codebase, please upgrade to the latest version when possible

A set of components for managing component states (including mounting and unmounting) over time, specifically designed with animation in mind.

Documentation

- Main documentation
- Migration guide from v1

TypeScript

TypeScript definitions are published via **DefinitelyTyped** and can be installed via the following command:

```
npm install @types/react-transition-group
```

Examples

Clone the repo first:

```
git@github.com:reactjs/react-transition-group.git
```

Then run `npm install` (or `yarn`), and finally `npm run storybook` to start a storybook instance that you can navigate to in your browser to see the examples.
